Research Experience

1. CUHKSZ - SRIDB - Data-driven Intelligent Information System Laboratory (Supervisor: Dr. Guangxu Zhu, 2023.08-2024.08):

Project I: CSI-BERT: A Multifunctional WiFi Sensing Model (served as team leader)

- Proposed the CSI-BERT1 framework based on Bidirectional Encoder Representations from Transformers (BERT) and Domain Adversarial Neural Networks (DANN) to recover lost Channel State Information (CSI) data, improving the performance of WiFi sensing models and enabling advanced WiFi sensing tasks.
- Developed the CSI-BERT2 framework, which generates CSI data that is difficult to collect and enables WiFi sensing with different CSI sampling rates, a capability not present in previous models.
- Collected and published a multi-modal CSI dataset comprising video data collected by a dual camera, CSI data collected by ESP32, and distance measurements between the router and receiver computed by FTM (Fine Time Measure).

Project II: Realtime WiFi Sensing System

- Implemented various WiFi sensing algorithms on ESP32, including intrusion detection, breath detection, falling detection, and trajectory location.

Project III: 5G-Energy Consumption Modelling

- Proposed a novel attention mechanism to adaptively determine the weights of each input feature with minimal computation.
- Developed a masking training mechanism to enhance the model's generalization capability and its ability to handle novel variables in the test set.

Project IV: WiFi Sensing using LLM Prompt-Tuning

- Under Way

2. SYSU - Intelligent and Multimedia Science Laboratory (Supervisor: Prof. Chengying Gao & Prof. Ning Liu & Dr. Xiao Liang, 2021.12-2024.03):

Project I: PianoBART: Symbolic Piano Generation and Understanding Model Based on BART (served as team leader, Research Funding: 6,000 CNY, Final Grade: Excellent)

- Proposed the PianoBART1 framework based on Bidirectional and Auto-Regressive Transformers (BART), incorporating a random selection mechanism for pre-training to generate and understand music while avoiding information leakage.
- Developed the PianoBART2 framework, utilizing music understanding tasks to enhance pre-training based on Drop And REscale (DARE) algorithm and employing adversarial learning to generate more realistic music.

Project II: KD-ACR: Compress Automatic Chord Recognition Model by Knowledge Distilling (independent accomplish)

- Proposed a Knowledge Distilling (KD) framework to significantly compress large Automatic Chord Recognition (ACR) models for deployment on small devices.
