Research Interest

My research interests lie in sensing, prediction, and decision management for human-centered smart cities (e.g. intelligent transportation, smart grid, and smart home), addressing problems such as order dispatch, algorithmic labor management, wireless sensing, and traffic prediction. On the technical side, I focus primarily on deep learning, multi-agent reinforcement learning, transfer learning, federated learning, large models, and operations research. Overall, I am interested in and open to interdisciplinary AI, applied AI, and AI humanities.
